

TRAININGS

ISIT offers a full range of theoretical and technical training related to the technologies it supports, based on its multidisciplinary skills developed over the years, particularly in **safety and security, field networks** and **real-time systems**.

Our training courses are available face-to-face or remotely (FOAD) in:

- Inter-company: Training for employees from different companies,
- Intra-company: Training for employees of the same company, on dates that will suit you and thus be personalized if necessary.

ISIT's expertise, quality and know-how have contributed to its **QUALIOPHI certification**.

The QUALIOPHI label from ISIT, a national quality benchmark, attests to the quality of our implemented process, optimizes our organization, enhances our practices and allows us to benefit from funding via funding organizations in order to continue to satisfy our customers.

Sessions
<u>Automotive ISO 26262</u>
<u>Avionics DO178C</u>
<u>Avionics DO254</u>
<u>Rail EN 50128</u>
<u>Industry IEC 61508</u>
<u>Safety of machines ISO 13849</u>
<u>Agriculture ISO 25119</u>
<u>Medical IEC 62304</u>
<u>Cybersecurity software and embedded systems</u>

CYBERSECURITY

Safety & Security Convergence for Embedded

*ISIT provides solutions
for the development and deployment
of embedded systems, specialized in the fields of
safety and cybersecurity.*

*For more than 30 years, ISIT has been committed to
its customers by **offering products** (hardware and
software) and **software tools / bricks (IP) oriented
software quality, operational safety and
cybersecurity**, allowing to build effective answers
specifically adapted to the needs of stakeholders in
the field.*

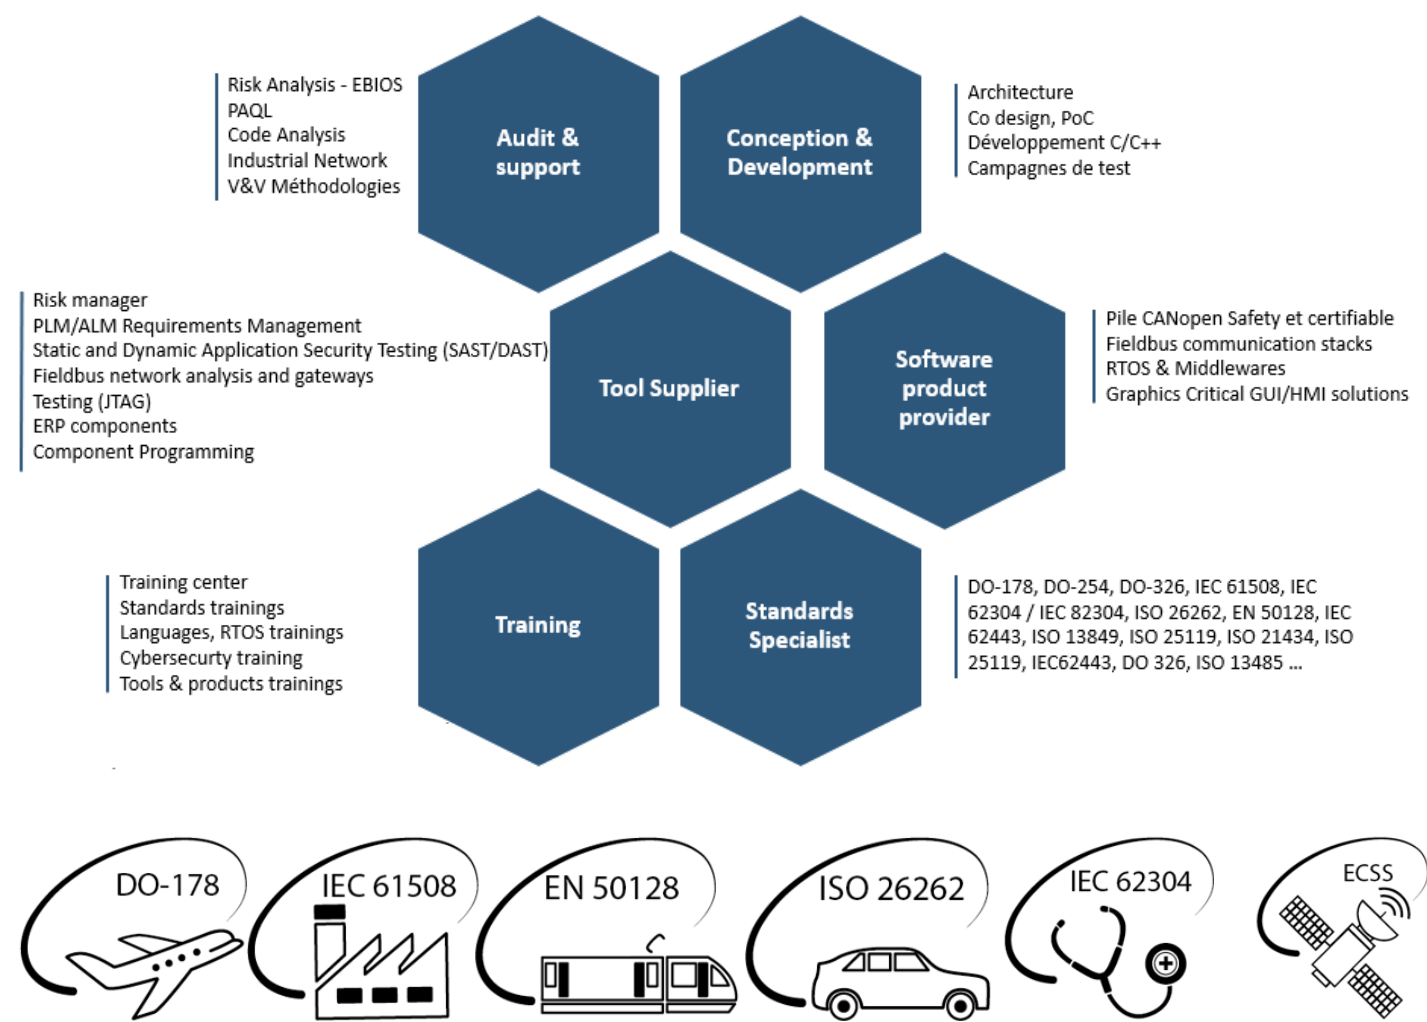

*ISIT brings global solutions from design e to
industrialisation, thanks to the supply of products
and services: by offering support services, ranging
from expertise on technologies and products, to the
development of applications, through training,
testing and validation.*

SERVICES

Based on a large set of skills, ISIT has developed a range of services to support its customers in their projects:

- **Advice and support in software quality assurance**, from activity planning to software validation, for certification or for improving internal processes
- **Training** in functional safety standards and the implementation of appropriate technologies (safety and secure communication protocols, certified/certifiable RTOS, etc.)
- **Audit of source code** and documentation following the software to verify compliance with the requirements of functional safety standards (IEC 62304, IEC 61508, ISO 13489, etc.) and/or cybersecurity (UL2900, IEC 60601/FDA, IEC 62443, DO326A/ED202A, ISO21434...)
- **Development of critical embedded software**, at application level or low level (creation / porting of BSP, communication stack, etc.) in quality assurance, with or without final certification
- **Software verification services** (advanced static analysis, unit and integration testing, validation) in accordance with the requirements of the security standards applicable to the project
